Deload	Recovery week. Build for a couple weeks and let the body recover before you build again.
W/C	Warm up and cool down - 10 min w/c means 10 minutes for warm up and 10 min for cool down.
Strides	Fast pick ups. The goal is to feel fast, strong and in control. Walk back to the start after each one.
Hill Strides	Not a super steep hill (3- 5% grade), but enough that you feel the hill on the stride.
Easy Run	This pace should be easy and conversational. There is no benefit of going to fast on an easy run.
Tempo Intervals	Intervals at tempo pace with recovery jogs between intervals - also known as Threshold running
Tempo Runs	Steady tempo pace (approximately 1 hour race pace)- can be a few sec/mile slower than tempo intervals
Hill Tempo	Short hill tempo intervals, jog back to the start - simulates the hills of Boilermaker
Interval	Short fast intervals with equal recovery time between intervals. Approximately 10 - 15 min race pace.
Long Runs	Once a week an easy and longer effort. These should be easy unless otherwise stated in the plan.
